Weekly Coal Production

Production for Week Ended:
February 6, 1988

Summary

U.S. coal production in the week ended February 6, 1988, as estimated by the Energy Information Administration, totaled 18.1 million short tons (bituminous coal and lignite, 18.0 million short tons; Pennsylvania anthracite, .08 million short tons). This was 4.1 percent lower than production in the previous week, and was 3.2 percent lower than production in the corresponding week of 1987.

Cumulative data in Table 1 are presented for the 52-week period ended in the current week. Data for the 52-week period ended in the corresponding week one year earlier are also included.

The methodology used to make weekly estimates of coal production was published in the Weekly Coal Production (DOE/EIA-0218(86/35)), released for publication on September 8, 1986.
